

# M200TP PROPANE VACUUM

The M200TP is a triple powered electric, gasoline, and propane dust extractor that can tackle up to 400 m<sup>3</sup>/h, allowing the user to work without unnecessary interruptions. The M200TP is not just powerful, robust and effective but also versatile. It can handle all kinds of fine dusts and materials created on a construction site from cutting concrete, sanding, grinding or drilling floors or walls, as well as dust from many other industrial factory processes. The machine can be connected to floor grinders and handheld tools like cutting machines, chisel hammers and saws.

The M200TP comes complete with an 10,000W, 499cc, 4 stroke OHV engine generator. The generator provides an alternative power source when a reliable electrical source is unavailable. When propane or gasoline is used, the M200TP has the capability to power a grinder or hand tools in addition to the vacuum.

**TRIPLE POWER** 

As a standard the M200TP is equipped with a patented self-cleaning filter (washable polyester) and a HEPA H13-filter built to be Application Class H. A signal lamp shows when it's time to clean the filter.

The M200TP delivery package includes:

- 5 m hose (Ø 50),
- a chrome steel wand and a strong aluminum floor tool
- Longopac plastic sack, 20m
- puncture proof wheels of "non marking-type" - can be locked to make it possible for the user to work on uneven ground.

## Technical Data

H x W x L (Inches)	54"x29"x55"
Weight	315 Lbs.
Inlet	Ø 3"
Collection	10 US gal / 5 US gal longopac
Flow at open inlet 115V	212 cfm
Negative pressure max 115V	21 kPa /84 inwg
Pwer consumption 115V	2100W
Filtration	HEPA
Sound level	70 dB(A)
